Experienced Front-end Developer with 8+ months of industry experience. Proficient in React js, HTML, CSS, and JavaScript development. Proven ability to work effectively in a fast-paced, collaborative environment. Passionate about staying up-to-date with the latest front-end technologies and best practices. Committed to delivering high-quality, intuitive web experiences for users.

WORK EXPERIENCE

Senior Analyst eClerx Services Limited

05/2022 - 01/2023

Pune

Achievements/Tasks

- I have extensive experience working in an Agile software development environment, utilizing the Scrum process to successfully deliver web applications. Specifically, I have worked on a project that utilized HTML, JavaScript, CSS, and React.js.
- During this project, I was responsible for implementing responsive and user-friendly designs, which required me to have a deep understanding of design principles and front-end development best practices. I was also responsible for debugging and troubleshooting front-end issues, which required me to be able to work efficiently under pressure while maintaining a high level of attention to detail.
- Furthermore, I integrated APIs into the functional components of the web application, which required me to have strong technical skills and knowledge of RESTful APIs. Additionally, I developed reusable, adaptive, and interactive UI components that enhanced the overall user experience of the application.
- Overall, my experience working on this project has equipped me with a wide range of skills that I can apply to future projects, including project management, problem-solving, technical expertise, and design proficiency.

PERSONAL PROJECTS

YouTube Clone App (05/2023 - 05/2023)

- Developed a stunning YouTube clone app using React js and the newest version of Material UI.
- Built custom categories, responsive channel and video cards, and channel pages for a seamless user experience.
- Implemented video pages where users can play videos directly from the app, view related videos, and see video statistics such as likes and views.
- Integrated RapidAPI to fetch videos from different channels and display them in the app.
- Incorporated a search functionality that allows users to find videos on specific topics or channels.

MERN Stack Blog App (06/2023 - 07/2023)

- Build a blog app using the MERN stack (MongoDB, Express JS, React JS, Node JS).
- The app includes functionalities such as registration, login, logout, creating, editing, and deleting posts.
- It covers topics like password hashing, token generation, file uploading, and handling different user roles.
